

Diagramatix — Quick Reminder Sheet 11

AI Generation for BPMN Diagrams

Diagramatix can draft a BPMN model from a plain-language description of a process, then hand you an editable diagram. There are two ways in: a one-shot **AI Generate** panel for speed, and a two-phase **AI Plan** panel for control. Both support saved prompts, dictation, audio-to-process, and attaching files or images for context.

ONE-SHOT: AI GENERATE

Type a description of the process and press **Generate**. Diagramatix plans the elements and connections and runs the layout engine server-side, returning a finished, positioned BPMN diagram in a single step. Choose whether to **Replace** the canvas or **Add to** the existing diagram.

TWO-PHASE: AI PLAN (REFINE → PLAN → APPLY LAYOUT)

For more control, work in three stages:

Refine — The model reads your prompt and asks a short set of high-impact, multiple-choice **clarifying questions**. Your answers are folded back into the prompt. Refine deliberately **stops there** — it never auto-generates — so you sharpen the brief first.

Plan — Generates an editable **plan** (elements and connections as structured data) — but no layout yet. Review and edit it across tabs: **Pools/Lanes**, **Elements**, **Connectors**, and **Raw JSON**.

Apply Layout — Validates the (possibly edited) plan and runs the deterministic layout engine to position everything. This step is pure geometry — **no AI call** — so results are repeatable.

RULES THAT STEER GENERATION

Editable **Diagram Rules** shape the output. **Green** rules are AI-enforced and sent to the model as guidance; **red** rules are geometric and enforced by the layout engine in code (never sent to the model). Rules can also be grounded in the APQC PCF.

MODELS

The default generation model is **Haiku 4.5** (a SuperAdmin setting can change it). SuperAdmins also get **Compare all models** — it generates with Fable 5, Opus 4.8, Sonnet 5, and Haiku 4.5, then fills the diagram from whichever result has the fewest connector-conformance issues.

Tip: Use Refine first on vague briefs — a few answered questions produce a far better first draft than a long prompt.
